AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph at page 19, line 6, as follows:

To further promote stable foreign body capsule structure without interfering with angiogenesis, an additional outermost layer of material comprised of a thin low-density non-woven polyester (e.g., manufactured by Gore) can be laminated over the preferred PTFE described above. In preferred embodiments, the thickness of this layer is about 120 µm. This additional thin layer of material does not interfere with angiogenesis and enhances the manufacturability of the angiogenic layer. [See U.S. Patent No. 5,453,278 to Brauker Chan et al., hereby incorporated by reference; PCT Patent Publication Nos. 96/32076, 96/01611, and 92/07525 assigned to Baxter].
